

IN THE SPECIFICATION:

Please amend the title of the invention as follows.

THERAPEUTIC DEVICE OPERATIVELY CONNECTED TO A PROTECTIVE  
SUIT AND SUPPLYING HERB ESSENCE EVAPORATED FROM HEATED HERB TO  
THE PROTECTIVE SUIT

Please amend the paragraph at lines 12-15 on page 5 of the specification as originally filed as follows:

The natural five primary substance stone that is coated on the upper cover and the lower mat is a mixture of powders of about 10% to 20% by weight of a ~~fulcrum stone~~ hematite, about 10% to 20% by weight of mastodon bones, about 30% to 40% by weight of an elvan, about 10% to 20% by weight of mica, and about 10% to 20% by weight of a loadstone.

Please amend the paragraph at lines 15-24 on page 7 of the specification as originally filed as follows:

FIG. 2 is a schematic view of the internal structure of the upper cover of the device according to the present invention. FIG. 3 is a cross-sectional schematic view of the internal structure of the lower mat of the device according to the present invention. According to the preferred embodiment, the upper cover 2 is a mat of a constant-temperature heating body, which is laminated with cloth 13', preferably made of jacquard, sponge 14', an insulation material 15, a hot wire 16, an aluminum thin sheet 17, non-woven fabrics 18, a five primary substance stone 10 and Jagad cloth 13 in the named order. Preferably, the five primary substance stone is a mixture of powders of about 10% to 20% by weight of a ~~fulcrum stone~~ hematite, about 10% to 20% by weight of mastodon bones, about 30% to 40% by weight of an elvan, about 10% to 20% by weight of mica, and about 10% to 20% by weight of a loadstone.

Please amend the paragraph at lines 1-8 on page 9 of the specification as originally filed as follows:

On the other hand, as shown in Fig. 1a, the user who is placed between the lower mat 3 and the upper cover 2 of the device 100 may put on a generally enclosed protective suit 21, in the form of an overall, that is preferably made of typical non-woven fabrics and waterproof coating material. The protective suit 21 is preferably coated with the natural five primary substance stone on the interior, so that the remote infrared rays are emitted therefrom. The temperature of the body is raised and the heat is collected, such that the user perspires and the discharged perspiration does not flow to the outside. As a result, the herb fume is well absorbed into the skin cells on the body when the herb essence and perfume are supplied.
